

Adam Hachicha

Software Engineer at Cartier

Email: adam.hachicha@student-cs.fr **Phone:** 06 21 56 39 92 **LinkedIn:** Adam Hachicha
Github: AdamHPro

Objective

Software Engineer at **Cartier Horlogerie** since April 2026, building backend APIs and AI-powered tooling in Python and TypeScript, deployed on Docker and GCP in production. I'm now looking to join a **Software Engineer** or **Data Engineer** team to keep solving real-world Data/AI problems at scale.

Experiences

Software Engineer

Apr 2026 – Present

Cartier Horlogerie

Designed and developed a full-stack admin platform (Django, HTMX, Alpine.js) for configuring supplier extraction rules, consumed by a FastAPI service powering an agentic AI pipeline for automated invoice processing at goods-receipt stations. Engineered a daily ETL pipeline feeding BigQuery with a Looker Studio dashboard for monitoring, and extended an open-source automation platform by developing custom add-ons and modifying its TypeScript codebase for internal integration. Containerized and deployed all services on GCP (Cloud Run, Cloud SQL, GCS) using Docker.

Technologies: Python, Django, FastAPI, TypeScript, Docker, GCP (Cloud Run, BigQuery), Looker Studio

AI Engineer at Illuin Technology / Paris Digital Lab

Sept 2025 – Feb 2026

Delivering end-to-end MVPs (AI Solutions) for major corporations in 7-week cycles. combining Design Thinking with robust deployment and user adoption strategies.

Technologies: Python, Docker, Django, FastAPI, ReactJS, RAG, Agentic AI

Agentic AI Workflow & RAG System – Caisse des Dépôts

Jan 2026 – Feb 2026

Engineered an autonomous agent utilizing **Mistral AI LLMs** and **LangGraph** to parse complex event data from emails and attachments (PDF/Images via OCR). Designed a multi-modal reasoning pipeline that autonomously decides to perform web searches or scan documents when data is ambiguous. Integrated a RAG system using **MistralEmbeddings** to match events with collaborators.

Technologies: Python, LangGraph, Mistral AI LLM, MistralEmbeddings, PostgreSQL, Docker, Pydantic.

Singapore Public Transport Analytics Dashboard

Feb 2025 – May 2025

National University of Singapore

Built real-time analytics system processing 5,000+ bus stops data with automated data orchestration pipeline. Implemented advanced data processing workflows using Airflow, Redis caching for performance optimization, and integrated AI-powered insights using ChatGPT with RAG architecture for intelligent recommendations.

Technologies: Apache Airflow, Redis, SQL, Python, Dash, Plotly, OpenAI GPT

Education

CentraleSupélec, Paris, France

Sept 2023 – Present

Master of Engineering, Specialization in Machine Learning & Data Engineering

Relevant Coursework: Deep Learning, Statistics & Learning, Advanced Probabilities, Information Retrieval

Academic Exchange: National University of Singapore (NUS) – Data Engineering Focus

Lycée Saint-Louis, Paris, France

Sept 2021 – July 2023

Preparatory Classes for Engineering Schools (Mathematics, Computer Science, Physics)

Technical Skills

- **Programming:** Python, TypeScript, SQL, Git
- **Deployment & Cloud:** Docker, Linux, Google Cloud Run
- **AI:** Agentic AI, RAG, scikit-learn, Keras, pandas, NumPy, matplotlib
- **Data Engineering:** Apache Airflow, Redis, PostgreSQL, Google BigQuery, Looker Studio

Leadership & Involvement

Hagir Association: Supporting students with disabilities through mathematics tutoring.

Field Hockey Association: Team collaboration, strategic thinking, and performance optimization.

Private Mathematics Tutor: Teaching advanced mathematics, developing strong communication skills

Languages

French (Native), English (Fluent - C1), Arabic (C1), German (School level)
